

onering

Multi-Chain Cross-Stable Coin Yield Optimizer

Background.

There are:

\$7'840,553,647.28

stables just sitting in wallets

The Problem.

Technical complexity

- DeFi is difficult for inexperienced users
- Stable coin labels like 3CRV are not understood by the mass market
- Moving across chains is tedious and not user friendly
- It's difficult to locate and manage multiple farm options

Information asymmetry

- Too many farming opportunities making them overwhelming and discouraging for the average user
- Too many blockchains to farm on
- Risk analysis is complex and involves protocol risk, team abilities, stablecoin price peg mechanic analysis

There are millions of dollars sitting idle that could be used to farm and earn profits.

The Solution.

One Ring Yield Optimizer

Deposit any stablecoin

One Ring will find the best yields for your deposit.

Already working product on Polygon

Leveraging stablecoin farms on Sushiswap, next Dinoswap, followed by other protocols.

One Ring is optimal for:

- Risk averse investors
- Safe investments
- "Bear market" conditions

\$RING token stakers have the ability to:

- Benefit from fees made by the protocol
- Vote on the implementation of new farms
- Vote on the inclusion of new blockchains
- Vote on the parameters of buy backs

One Ring auto-compounds profits, turning APRs into APYs, to leverage the yield

Cross-chain farming capabilities

Product Overview.

1. User deposits \$1,000,000
of ANY STABLECOIN to One Ring vaults

0% Deposit fee

2. One Ring vaults generate
~20% APY on deposits

25% Profit fee (\$50,000)*

3. User withdraws \$500,000
from One Ring vaults

0% Withdrawal fee

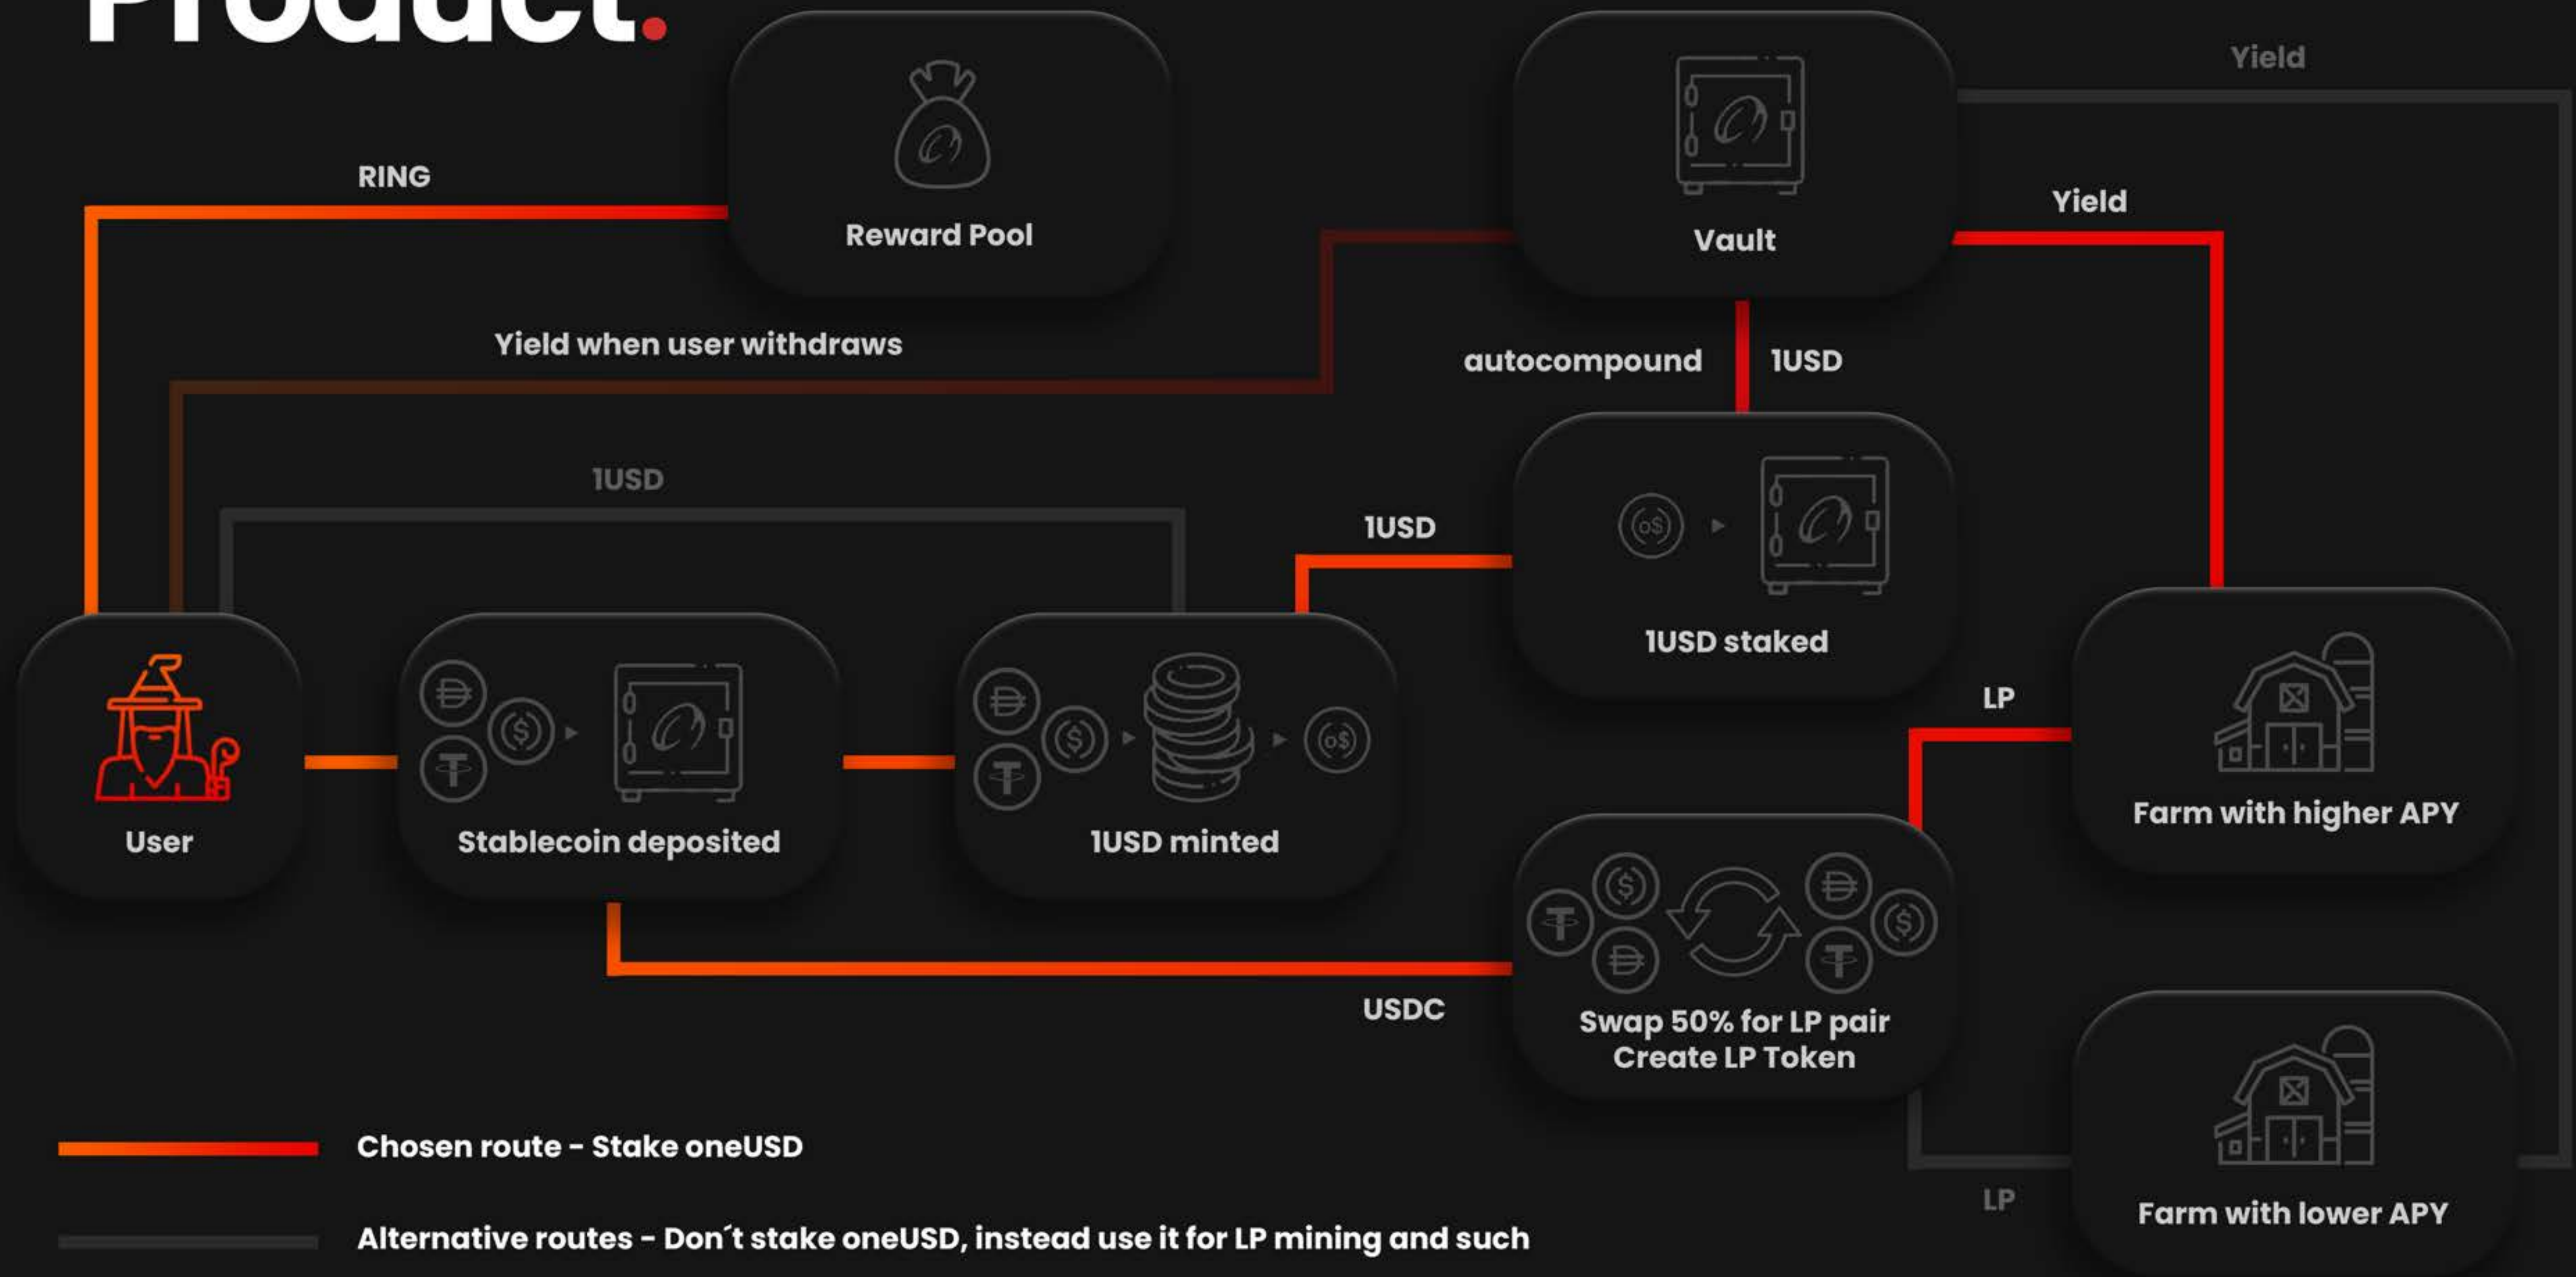

Assuming ~20% APY:

 **User net profit: \$150,000**

 **Protocol profit: \$50,000**

*Trading fees collected by LP tokens in LP strategies go completely to the user.

\$RING Token.

The One Ring Token (\$RING) is the utility & governance token of the One Ring ecosystem.

**Capture the value
of the ecosystem**

**Fees are used to
buyback the token**

Governance

**Vote to add new
farms and chains**

**Discounts on fees
for \$ RING stakers**

Tokenomics.

SEED	12,000,000	12.00%	\$0.13	1M L. + 18M LV.

LBP	2,000,000	2.00%		
TOTAL	100,000,000	100.00%		

Roadmap.

Q1 2022

- IDO on Fantom
- Polygon Implementation
- Fantom integration
- Staking & Liquidity mining

Q2 - Q3 2022

- Governance launch
- Avalanche Integration
- Arbitrum Integration
- Solana Integration

Q3 - Q4 2022

- Cardano integration
- Polkadot integration
- Terra integration
- Listing on Tier 1 exchange
